PREFACE

This book presents a unified macroscopic theory of electromagnetic waves in accordance with the principle of special relativity from the point of view of the form invariance of the Maxwell equations and the constitutive relations. Great emphasis is placed on the fundamental importance of the \overline{k} vector in electromagnetic wave theory. We introduce a fundamental unit $K_o = 2\pi$ meter⁻¹ for the spatial frequency, which is cycle per meter in spatial variation. This is similar to the fundamental unit for temporal frequency Hz, which is cycle per second in time variation. The unit K_o is directly proportional to the unit Hz; one K_o in spatial frequency corresponds to 300 MHz in temporal frequency.

This is a textbook on electromagnetic wave theory, and topics essential to the understanding of electromagnetic waves are selected and presented. Chapter 1 presents fundamental laws and equations for electromagnetic theory. Chapter 2 is devoted to the treatment of transmission line theory. Electromagnetic waves in media are studied in Chapter 3 with the kDB system developed to study waves in anisotropic and bianisotropic media. Chapter 4 presents a detailed treatment of reflection, transmission, guidance, and resonance of electromagnetic waves. Starting with Cerenkov radiation, we study radiation and antenna theory in Chapter 5. Chapter 6 then elaborates on the various theorems and limiting cases of Maxwell's theory important to the study of electromagnetic wave behavior. Scattering by spheres, cylinders, rough surfaces, and volume inhomogeneities are treated in Chapter 7. In Chapter 8, we present Maxwell's theory from the point of view of Lorentz covariance in accordance with the principle of special relativity. The problem section at the end of each section provides useful exercise and applications.

The various topics in the book can be taught independently, and the material is organized in the order of increasing complexity in mathematical techniques and conceptual abstraction and sophistication. This book has been used in several undergraduate and graduate courses that I have been teaching at the Massachusetts Institute of Technology.

Preface

The first version of the book was published in 1975 by Wiley Interscience, New York, entitled Theory of Electromagnetic Waves, which was based on my 1968 Ph.D. thesis, where the concept of bianisotropic media was introduced. The book was expanded and published in 1986 with the present title and its second edition appeared in 1990. Since 1998, it has been published by EMW Publishing Company, Massachusetts. The development of the various concepts in the book relies heavily on published work. I have not attempted the task of referring to all relevant publications. The list of books and journal articles in the Reference Section at the end of the book is at best representative and by no means exhaustive. Some of the results contained in the book are taken from many of my research projects, which have been supported by grants and contracts from the National Science Foundation, the National Aeronautics and Space Administration, the Office of Naval Research, the Army Research Office, the Jet Propulsion Laboratory of the California Institute of Technology, the MIT Lincoln Laboratory, the Schlumberger-Doll Research Center, the Digital Equipment Corporation, the IBM Corporation, and the funding support associated with the award of the S. T. Li prize for the year 2000.

During the writing and preparation of the book, many people helped. In particular, I would like to acknowledge Chi On Ao for formulating the T_EX macros, and Zhen Wu for editing the text and constructing the index. Over the years, many of my teaching and research assistants provided useful suggestions and proofreading, notably Leung Tsang, Michael Zuniga, Weng Chew, Tarek Habashy, Robert Shin, Shun-Lien Chuang, Jay Kyoon Lee, Apo Sezginer, Soon Yun Poh, Eric Yang, Michael Tsuk, Hsiu Chi Han, Yan Zhang, Henning Braunisch, Bae-Ian Wu, Xudong Chen, and Baile Zhang. I would like to express my gratitude to them and to the students whose enthusiastic response and feedback continuously give me joy and satisfaction in teaching.

J. A. Kong

Cambridge, Massachusetts December 2007

CONTENTS

| Chapter 1. | FUNDAMENTALS | 1 |
|------------|--|----|
| 1.1 | Maxwell's Theory | 3 |
| | A. Maxwell's Equations | 3 |
| | B. Vector Analysis | 6 |
| 1.2 | Electromagnetic Waves | 24 |
| | A. Wave Equation and Wave Solution | 24 |
| | B. Unit for Spatial Frequency k | 27 |
| | C. Polarization | 33 |
| 1.3 | Force, Power, and Energy | 45 |
| | A. Lorentz Force Law | 45 |
| | B. Lenz' Law and Electromotive Force (EMF) | 53 |
| | C. Poynting's Theorem and Poynting Vector | 56 |
| 1.4 | Hertzian Waves | 65 |
| | A. Hertzian Dipole | 65 |
| | B. Electric and Magnetic Fields | 68 |
| | C. Electric Field Pattern | 71 |
| 1.5 | Constitutive Relations | 81 |
| | A. Isotropic Media | 82 |
| | B. Anisotropic Media | 83 |
| | C. Bianisotropic Media | 84 |
| | D. Biisotropic Media | 85 |
| | E. Constitutive Matrices | 86 |
| 1.6 | Boundary Conditions | 90 |
| | A. Continuity of Electric and Magnetic Field | |
| | Components | 90 |
| | B. Surface Charge and Current Densities | 92 |
| | C. Boundary Conditions | 93 |
| 1.7 | Reflection and Guidance | 98 |
| | A. Wave Vector \overline{k} | 98 |

- vii -

| | B. Reflection and Transmission of TE Waves | 99 |
|------------|--|-----|
| | C. Reflection and Transmission of TM Waves | 105 |
| | D. Brewster Angle and Zero Reflection | 107 |
| | E. Guidance by Conducting Parallel Plates | 111 |
| | Answers | 120 |
| Chapter 2. | TRANSMISSION LINES | 137 |
| 2.1 | Transmission Line Theory | 139 |
| | A. Transmission Line Equations | 139 |
| | B. Circuit Theory | 144 |
| 2.2 | Time-Domain Transmission Line Theory | 153 |
| | A. Wave Equations and Wave Solutions | 153 |
| | B. Transients on Transmission Lines | 156 |
| | C. Normal Modes and Natural Frequencies | 168 |
| | D. Initial Value Problem | 170 |
| 2.3 | Sinusoidal Steady State Transmission | |
| | Lines | 180 |
| | A. Sinusoidal Steady State | 180 |
| | B. Complex Impedance | 181 |
| | C. Time Average Power | 186 |
| | D. Generalized Reflection Coefficient | 187 |
| | E. Normalized Complex Impedance | |
| | (Smith Chart) | 190 |
| | F. Transmission Line Resonators | 192 |
| 2.4 | Lumped Element Transmission Lines | 201 |
| | A. Lumped Element Line | 202 |
| | B. Dispersion Relations for Lumped Element | |
| | Lines | 205 |
| | C. Periodically Loaded Transmission Lines | 208 |
| 2.5 | Transmission Line Modeling | 215 |
| | A. Modeling Reflection and Transmission | 215 |

| | B. Modeling Antenna Radiation | 220 |
|------------|---|------------|
| | C. Array Antennas | 225 |
| | D. Array Pattern Multiplication | 229 |
| | E. Equivalence Principle | 235 |
| | Answers | 249 |
| Chapter 3. | MEDIA | 261 |
| 3.1 | Time-Harmonic Fields | 263 |
| | A. Continuous Monochromatic Waves | 263 |
| | B. Polarization of Monochromatic Waves | 265 |
| | C. Time-Average Poynting Power Vector | 266 |
| | D. Waves in Conducting Media | 268 |
| | E. Waves in Plasma Media | 271 |
| | F. Dispersive Media | 278 |
| | G. Field Energy in Dispersive Media | 282 |
| 3.2 | Bianisotropic Media | 292 |
| | A. Anisotropic Media | 292 |
| | B. Biisotropic Media | 295 |
| | C. Bianisotropic Media | 296 |
| | D. Symmetry Conditions for Lossless Media | 297 |
| | E. Reciprocity Conditions | 299 |
| | F. Causality Relations | 301 |
| 3.3 | kDB System for Waves in Media | 306 |
| | A. Wave Vector \overline{k} | 306 |
| | B. The kDB System | 309 |
| | C. Maxwell Equations in kDB System | 313 |
| | D. Waves in Isotropic Media | 314 |
| | E. Waves in Uniaxial Media | 315 |
| | F. Waves in Gyrotropic Media | 323 |
| | G. Waves in Bianisotropic Media | 330 |
| | H. Waves in Nonlinear Media | 339 |
