Subsidence Detection by PSInSAR Based on High Resolution TerraSAR-X Images	11
Multi-mode SAR Interferometry Processing Research and Implementation	16
Mitigation of Atmospheric Water-vapour Effects on Spaceborne Interferometric SAR Imaging through the MM5 Numerical Model	20
Electromechanical Coupling Optimization Design of Large Reflector Antennas Include Feed (Sub Reflector) Support Structure	25
Updating Methods for Antenna Servomechanism Structures	30
Improved Coupling Matrix Extracting Method for Chebyshev Coaxial-cavity Filter	36
Subreflector Real-time Compensation for Main Reflector Deformation of Shaped Cassegrain Antenna ..	42
Performance of Planar Slotted Waveguide Arrays with Surface Distortion	47
Performance Enhancement of FDTD-PIC Beam-wave Simulations Using Multi-core Platforms	52
X-ray Microbeams for Radiobiological Studies: Current Status and Future Challenges	56
Design of Narrowband Multilayer for Cr K_{α} X-rays	61
Energies in Electromagnetic Field and Gravitational Field	66
Electromagnetic Sources and Observers in Motion I — Evidence Supporting the EM Propagation Medium for the Transmission of Light	71
Electromagnetic Sources and Observers in Motion II — Einstein’s Ether-less Relativity Versus Lorentz’s Medium Based Theory	77
On the A, B, C Numbers and Their Application in the Theory of Circular Waveguide with Azimuthally Magnetized Ferrite	82
Cosmic Deceleration Parameter $q(Z)$ Dependence upon Gravitons? Implications for DM Models, DE, and the Search for Gravitons as Measured via E and M Interactions in Detectors	87
Underground Diseases Identification of Airport Runway Using GPR	92
Satellite Thermal Monitoring of Arctic Ice Front in Relation to Dynamics of a Polar Orbital Ocean Circulation	97
Satellite Thermal Monitoring of Ocean Water Front Formation after an Intruding Bering Sea Water into the Arctic Sea	100
Satellite Thermal Monitoring of Ocean Front Evolution in Relation to Ocean Climate in the North Atlantic, Pacific and Arctic Sea	104
Possible Abnormal Phenomenon of the Atmospheric Water Vapor before Hengchun Earthquake	109
The Time-space Relationship between Strain, Temperature and Acoustic Emission of Loaded Rock ...	114
Modelling the Effect of a Defect on Crosstalk Signals under the Weak Coupling Assumption	119
A Theoretical Study of Transition Probabilities for Rare Gas Atoms in an Alternating Electric Field ..	124
Influence of Carbon Coatings on the Breakdown Threshold for an S-band Pillbox Output Window ...	128
Resistance to Earth of Grounding Grids in Tow-layer Soil Structure Using FEM and GA	132
Analysis for the Stability of Hughes-type Coupled Cavity in an Extended-interaction Klystron	136
Experimental Study on the Microwave Monitoring of Rock Stress and Fracture	140

Analysis of Saturation Effects on the Operation of Magnetic-controlled Switcher Type FCL	145
Radiation Force of a Focused Stochastic Electromagnetic Beam	150
Broaden the Bandwidth of Patch Antenna by Using Inhomogeneous Metamaterial Substrate	155
Application of Periodic Structure on the Isolation and Suppression for Notebook Multi-antennas Coupling	160
Tunable Metamaterial Ferrite Stepped Impedance Resonator (SIR)	165
<i>a-b</i> Plane Dielectric Discussion on Layered Multiferroic Oxides	169
Realization of Negative Refraction via Overlapping Ferroelectric and Ferromagnetic Oxides	172
Electromagnetic Tunneling in Nonconjugated Epsilon-negative and Mu-negative Metamaterial Pair ...	177
FDTD Study of a Novel Terahertz Emitter with Electrical Field Enhancement Using Surface Plasmon Resonance	181
PML-FDTD Method in Prolate Spheroidal Coordinates	185
Investigation of UPML in the FDTD Analysis of Planar Microstrip Structures	189
Application of Moving Coordinate FDTD Method on Electromagnetic Pulses Propagation	192
An Efficacious Computational Procedure to Solve Electromagnetic Transients on Transmission Lines Represented by State Equations	196
Processing of MR Slices of Human Liver for Volumetry	202
Detection of Magnetization of 6 Hz, 10 μ T Magnetic Field Applied Water Using PT-MI Sensor	205
An Optimized Universal Adaptive ARC Filter Block	209
Processing of MR Slices of Temporomandibular Disc for 3D Visualization	213
Modeling of Saturation Characteristic of an Aspiration Condenser	216
Integrated Programming and Application of Genetic Algorithm and Conjugate Gradient Method	221
Student Projects of Extended Study in Introductory Electromagnetics	225
Discussion on Teaching Electromagnetic Field and Wave Course	229
Perspective of Electromagnetics Education	233
Study on the Duality of Frequency Selective Surfaces with Rectangular Complementary Elements	237
Observation of Geometric Resonance in a Corrugated Waveguide	241
Compact Coplanar-waveguide Band-rejection DGS Resonators	245
Spatial Beam Splitter Design Using Fishnet-type Periodic Structure	248
Thermal Infrared Spectrum Property of Loaded Rock	252
Generalized Maximum Efficiency Theory on Multi-stage Inductive Coupling	256
The Computation of Coupling onto the Wires Enclosed in Cavity with the Apertures	262
3D GL EMFH Modeling and Inversion for Leakless Auto EMS in Steel Metal Casting and Biomedical EM Instruments Design	268
Iterative Method for Differential Phase Shift Computation in the Azimuthally Magnetized Circular Ferrite Waveguide	274
A Franklin Array Antenna for Wireless Charging Applications	279
A Miniatured WLAN/Wi-MAX Chip Antenna for Mobile Phone Applications	284
A Beam Switching Planar Yagi-patch Array for Automotive Applications	289
Dual-band Dual-polarized Hybrid Antenna Array	294
An Outdoor Bistatic Scattering Assessment Using Array Antennas	299
Design of a Printed Antenna Array for Cost-effective ATE to Reduce the Radiated EMI Yield Loss ...	304
Wang-shaped Patch Antenna with a Simple Feed Network	308
Biological Model in Electromagnetic Exposure Safety	312

Human Exposure Assessment for Wireless Power Transmission System	316
A Comparison of Ansoft HFSS and CST Microwave Studio Simulation Software for Multi-channel Coil Design and SAR Estimation at 7T MRI	320
Development of Wave Absorbing Coating Optimization Software	325
Rotational Vector Addition Theorem and Its Effect on T-matrix	330
The Nonlinear Absorption of a Strong Electromagnetic Wave by Confined Electrons in Rectangular Quantum Wires	336
Theory of the Acoustomagnetolectric Effect in a Superlattice	342
Influence of the Output Electrical Parameters on Multistage Depressed Collector Characteristics in a Coupled Cavity TWT	347
Numerical Study on Readout Characteristics of Near-field Optical Disk	351
Getting Excitation Characteristic Curves of PTs with Linear Interpolation Method	354
A New Approach to Periodical Structure Analysis	360
A Numerical Simulation Study of the Effect of Array Shape on the Performance of Antennas	364
Analysis of Electromagnetic Field Affected by Liquid in Water Area Magnetotelluric Exploration	369
The Study of Field Source Static Shift in Frequency Domain Controlled-source Electromagnetic Sounding with Long Wire Source	373
The Physical Modeling Experiments Analysis of the Exploration Depth of Conventional Electric Survey	378
Cole-Cole Model Based on the Frequency-domain IP Method of Forward Modeling	383
Electric Field around a Metal Disk within a Microwave Resonator: Electrostatic Approximation	387
Study on Compact UWB Filter Composed of Defected Parallel Plates and Meander Line	391
FDTD Analysis of Light-beam Scattering from DWDD Disk with Control Layer	394
Study on Stepped Impedance Comb-line Filter with Defected Ground Structure	397
Generalized Coherent States for Quantized Electromagnetic Fields in Time-varying Linear Media	400
An Alternative Explanation for the Fraunhofer Sun Lines	408
Simulations of an Electromagnetic Microsystem Used in Biomedical Applications	413
Using Fictitious Currents for Calculating Electric Fields Produced by Capacitor Dielectrics	418
Numerical Modeling of Light Sources with R-FEM Method in CFX Environment	424
Two-dimensional Magnetotelluric Regularization Inversion Jointed with TE- and TM-mode Data	428
Three-dimensional Magnetotelluric Forward Modeling for Static-shifted Model	433
A Practical Scheme for 3D Geoelectrical Forward Modeling with Finite-infinite Element Coupling Method	437
MPI-based Parallel FDTD for EM Scattering from Coated Complex Targets	442
Galerkin's Method Using the Annular Patch Segments to Solve a Round Disk Capacitor	446
Determination of Eigenvalues of Closed Lossless Waveguides Using the Least Squares Optimization Technique	450
The Study of Numerical Simulation on Dual-frequency IP Method with FEM	455
An Improved Algorithm of Orthogonal Vector Spectral Estimation Method	460
Rigorous Computation of Large Radiation Problems by Means of an Iterative Approach	464
Advantages of DOF's Continuous Matching in EIT Inverse Problem	468
Highly Miniaturized On-chip Impedance Transformer Employing Coplanar Waveguide with Periodic Ground Structure on GaAs MMIC	472
Analysis of Characteristics of Coplanar Waveguide with Finite Ground-planes by the Method of Lines	476
A Study on Equivalent Circuit of Highly Isolated Coupled Microstrip Line Employing PGS on GaAs MMIC	481

Design of Suppressing Crosstalk by Vias of Serpentine Guard Trace	484
Model and Performance Analysis of Coplanar Waveguide Based on Different Oxide Structure HR-Si Substrate	489
Novel Rectangular Coupled Line Bandpass Filter	493
Optimization of Broadband Withdrawal Weighted SAW Filters	498
The Application of the Equal Area Law in Ferroresonance for Distribution Power System	502
High Input Impedance Electronically Tunable Voltage-mode Multifunction Filter	509
The Loop Ring BSF Design and Its Application in BPF Stopband Enhancement	513
Voltage-mode Highpass, Bandpass and Lowpass Filters Using a Single DVCC	517
Modified Approximation Types for Lossy Building Blocks	521
Optimization of ARC Component Filter Sensitivity	526
A Compact Microstrip Power Divider Using Periodic DGS and HIOS	531
Mode Conversion at Via Discontinuities in Microwave Circuits	535
The Feasibility of Numerical Calculations of Vias Using the Matrix-Penciled Moment Method	540
Microstrip Bandstop Filter Using E-shaped Dual Mode Resonator	545
Arbitrary Microwave Filters Using Waveguides Filled by Dielectric and Magnetic Layers	548
Waveguide Bandpass Filters Utilizing Only Dielectric Pieces	553
New Antenna Modelling Using Wavelets for Heavy Oil Thermal Recovering Methods	558
A Planar Antenna Array with Separated Feed (PAASF) with Air Gap Technique	563
Elements Reduction Using Unequal Spacing Technique for Linear Array Antenna	568
Reconfigurable Aperture Coupled Planar Antenna Array at 2.3 GHz	573
Comparison of Microwave Waveguide Applicators for Thermotherapy	579
Off-axis Scattering Particle Holography: A Numerical Study	584
A RCS Reduction Design of Object with Anisotropic Impedance Surface Using Genetic Algorithm	588
Asymptotic Waveform Evaluation in Anisotropic Impedance Wedge's Scattering Problem Including the Diffraction of Surface Waves	593
Electromagnetic Scattering from Anisotropic Inhomogeneous Impedance Cylinder of Arbitrary Shape with Generalized Impedance Boundary Condition	598
Scintillations in Weak Turbulence of Annular Beams Whose Individual Components Are Incoherent	601
An Application of a Fixed Point Iteration Method to Object Reconstruction	606
Frequency Dependence of Image Reconstruction of Linear Sampling Method in Electromagnetic Inverse Scattering	611
Diffraction Properties of Partially Coherent Elegant High-order Beam	615
Radar Cross Section of a Cavity in a Finite Elliptic Cylinder	619
A Novel GL Double Layer Electromagnetic Cloaks in Broad Frequency Band and Reciprocal Law	623
High Transmission Y-shaped Waveguides in 2D Photonic Crystals with Square Lattice	631
Surface Plasmon Resonance Electro-optic Light Modulator Based on Polymer Grating Coupler	634
Theoretical Analysis of Some Homogenized Metamaterials and Application of PML to Perform Cloaking and Back-scattering Invisibility	638
Self-field Theory-new Photonic Insights	644
Impact of Network Topology on the Matched-pulse-based Fault Detection	648
Modelling and Validating Ferrite-core Probes for GMR-eddy Current Testing in Metallic Plates	653
Rotating Electromagnetic Field for Crack Detection in Railway Tracks	658
High Resolution, Wide Coverage Termite Imager	663

Semi-Analytical Mode Match Approach for Scattering Computation of Randomly Densely-distributed Conductive Targets	668
The Decomposition of the Angular Spectrum Domain in the Parallel Multilevel Fast Multipole Algorithm	672
Lanczos Biconjugate A-Orthonormalization Methods for Surface Integral Equations in Electromagnetism	678
Analysis of Polynomial and Geometric Conductivity Profiles in PML Layers: A Comparison	683
Reflection Coefficient of the Isotropic-Dispersion Finite-Difference Time-Domain (ID-FDTD) Method at Planar Dielectric Interfaces	688
Analyzed of Yagi Antenna by the Theory of Maxwellian Circuits	693
Modelling of Coil-loaded Wire Antenna Using Composite Multiple Domain Basis Functions	696
A Method of Applying Single Higher Order Polynomial Basis Function over Multiple Domains	701
The Study on the Antenna Optimization	706
High Performance Antenna Array with Patch Antenna Elements	710
A Multiple Antenna System for RFID Access Control Management	714
60 GHz Meta-material Wideband Antenna for FPGA Giga Bit Data Transmission	717
A Miniature Coupled Loop Antenna to be Embedded in a Mobile Phone for Penta-band Applications ..	721
A Novel Design of Planar Spiral Antenna with Metamaterial	725
Compact Multi-band Antenna for Global Navigation Satellite Systems	729
A Numerical Study of the Interaction between Handset Antennas and Human Head/Hand in GSM 900, DCS, PCS and UMTS Frequency Bands	733
A Radar Eye on the Moon: Potentials and Limitations for Earth Imaging	738
Plane Wave Scattering by a Coated Thin Wire	743
Experimental Investigation on a Radio-on-free-space Optical System Suitable for Provision of Ubiquitous Wireless Services	750
Stimulated Terahertz Emission from Optically Pumped Epitaxial Graphene-on-Si Heterostructures	756
Analysis of Optical Coupling for SOI Waveguides	760
Continuous-wave Terahertz Spectroscopy System Based on Photodiodes	764
Image Observations and Analyses of RF Wave Propagations on the Basis of LEI Camera	769
Radio on LCX as Universal Radio Platform and Its Application	773
Close Proximity Wireless Communication Technologies Using Shortwaves, Microwaves, and Sub-terahertz Waves	777
Convergence of WDM Access and Ubiquitous Antenna Architecture for Broadband Wireless Services ..	783
Comparison of Microwave Links Prediction Methods: Barnett-Vigants vs. ITU Models	788
Peculiarities of the Total Electron Content and Their Reflections in the Ionospheric Model	793
Research of the Effect of Electromagnetic Interference on Magnetic Sensors due to the Data Transmitting System of the Seismic Electromagnetic Satellite	797
Charge Continuity Equation in the Gravitational Field	802
Pyroelectric Properties of the Sr-doped Ferroelectric Barium Iron Niobate	807
Study of EM Scattering from Electrically Large Objects in Planarly Multilayered Media with a Fast Algorithm	810
Efficient Analysis of Electromagnetic Scattering Problem Using Proper Orthogonal Decomposition	813
The Probability Distribution of the EM Fields in Single-cavity System and the Application of PWB Method	817
Design and Simulation of Planar Archimedean Spiral Antenna	821

Study on Optimize Efficiency of Particle Swarm Optimization for the Synthesis of Subarrayed Arrays .	825
Directive Surface Wave Excitation Using Yagi-Uda Slots	829
Wideband Slot Antenna by Controlling Resonances	832
Design of a Gaussian Backscatter Antenna with Ring Focus Feed	836
High Directive Gain Antenna Using Shorted-end Curved Strip Dipole on Electromagnetic Band Gap ..	840
Printed Temperature Sensors for Passive RFID Tags	845
Outline of Noise Spectroscopy Potentialities	849
Analysis of the RCS and Radiation Pattern of a Planar Array Antenna Integrated with Dielectric and FSS	853
Wide-Angle Transmission Wave Polarizers Using Dielectric Layers	857
A Broadband Shorted-patch Antenna for DCS/PCS/UMTS Application	862
Design of Planar Monopole Antenna with Annulus Shape for Ultra-wideband Applications	866
Universal UHF RFID Rose Reader Antenna	870
Antenna Radome Using Split Ring Resonator	875
Design of the Novel Band Notched UWB Antenna with the Spiral Loop Resonators	878
UWB Circular Polarization RFID Reader Antenna for 2.4 GHz Band	882
A Compact UWB Antenna Design for Breast Cancer Detection	887
An 8-element Tapered Slot Antenna Array with a Bandwidth in Excess of 16.5:1	891
Short Range Propagation Characteristics of UHF Frequency Band for Moving Vehicles RFID	895
A 1.2 V Low-power Receiver for Short Range Applications	899
Design of a Novel Three-way Tri-band Power Divider	903
Bit Error Rate Reduction of Multi-user by UWB Antennas	907
Author Index	912

Fine Exploration Based on Dense Frequency Pseudo-random Harmonic Electromagnetic Method	1004
GPR Migration Imaging Algorithm Based on NUFFT	1009
Analysis of MMW Imaging System with Scanning Mirrors and Extended Hemispherical Lens	1014
Simulation for GPR Echoes Based on Non-constant-Q Attenuation Model	1018
Adaptation in Front of Ground Penetrating Radar (GPR) Antenna by Layered Dielectric Slab and Resistive Loading	1023
Consideration of Antenna Pattern Design for FY3 Precipitation Measurement Satellite Dual-frequency Precipitation Radar	1028
A Millimeter-wave Interferometric Radiometer for Atmosphere Observation from Geostationary Orbit	1032
Forward Modeling of Direct Current Method Based on ANSYS	1036
Micro-motion Simulation and Micro-Doppler Extraction	1039
An Integration of Electronic System and Some Solutions to Its Key Point	1044
A Study of Deformation Monitoring Using StaMPS Technique	1049
Compact Dual-band Balanced Handset Antenna for WLAN Application	1054
Isolation Enhancement Based on Adaptive Leakage Cancellation	1059
Superluminal Phase Velocity in the Dispersive Media	1064
Application of EH4 in the Shihu Gold Deposit of Western Hebei, China	1068
An Optimized Monopole Microstrip Patch Antenna with Gradual Steps for Ultrawideband Applications	1072

Utilization of Effective Apparent Resistivity in Magnetotelluric Data Processing and Interpretation ..	1077
Research and Application on Supergain Property of Arrays for Target Detection	1081
Discrete Time Synergetic Control for DC-DC Converter	1086
Novel Optical Neuronal Cell and Data Recognition-generation Circuits in RFID Tags	1092
3-D Analysis of Magnetic Flux Density in Modular Toroidal Coil Using Cubic Meshing	1096
Electromagnetic Force Distribution on Cylindrical Coils' Body	1102
Magnetic Flux Density Analysis of Helical Toroidal Coil Using Finite Element Approach	1106
Numerical Simulations and Analysis of Electromagnetic Scattering from a PEC Target below a Two-layered Dielectric Rough Surfaces: Vertical Polarization	1111
Design and Development of a Ground-based Microwave Radiometer System	1116
Relationship between Lightning Discharges and Rapid Changes in Cross Polarization Discrimination of the Ka-band Satellite Radio Signal	1121
Calibration and Temperature Retrieval of Improved Ground-based Atmospheric Microwave Sounder ..	1125
Investigation of GPS-measured Ionospheric Total Electron Content Variations Generated by HF-heating at Mid-latitudes	1130
Fluctuation of Electromagnetic Field Parameters Propagating in Magnetized Plasma with Random Variation of Electron Density and Magnetic Field	1134
Radar Imaging of Target above the Gaussian Random Rough Surface Using the Accelerated MOM/PO Hybrid Method	1139
Channel Capacity Enhancement by Applying 3-D Space-polarization Diversity to MIMO Systems	1142
Convergecast of Multi-destinations in Zigbee Tree-based Wireless Sensor Network	1146
Conception of Patch Antennas in the GSM and UMTS Band	1150
Light Propagation in Micro-optical-lattice Waveguide	1156
A Combined Cavity with Improved Performance under Simultaneous Resonance of Sub-cavities	1161
Static Magnetic Field Interferes with the Physiological Removal of Circulating Apoptotic Lymphocytes	1166
Studies on the Effect of Static Magnetic Fields on Biological Systems	1171
Cellular Perception and Static Magnetic Fields Active Penetration Depth for Pain Magnetotherapy ..	1175
Analysis of Inhomogeneous Static Magnetic Field-Induced Antinociceptive Activity in Mice	1181
Radiation Induced Forward Emitter Current Gain Degradation of Lateral and Vertical PNP Power Transistors in Voltage Regulators	1188
Influence of Gamma Radiation on Some Commercial EPROM and EEPROM Components	1193
Ambiguous Influence of Radiation Effects in Solar Cells	1199
Influence of Tube Volume on Measurement Uncertainty of GM Counter	1204
Monte Carlo Simulations of Proton and Ion Beam Irradiation on Titanium Dioxide Memristors	1209
Influence of Irradiation on Semiconductor and Gas-filled Diodes for Over-voltage Protection	1215
A Shape Display Method Based on Electromagnetic Localization and Actuation	1221
Coplanar-fed UWB Elliptical Patch Antenna with Notched Band Characteristics	1225
Near Field Antenna Investigation and Evaluation for UHF RFID Systems	1229
The Design and Simulation of an S-band Circularly Polarized Microstrip Antenna Array	1233
A Design of Reconfigurable Patch Array Antenna with Dual Circular Polarizations	1238
Moment-method Analysis of Planar Archimedean Spiral Antenna with Dielectric Superstrate	1242
Elasticity-stochastic Description on the Adhesion of Elastic Media via Molecular Bond Clusters	1245
Electromagnetic Elasto-plastic Dynamic Behaviors of Conductive Circular Plate	1250
Rearrangement of Martensitic Variants and Mechanical-magneto-thermal Behavior of a Ferromagnetic Shape Memory Alloy Rod	1254

Analysis on Absorption and Thermal Stress of a Functionally Graded-absorbing Infinite Plate in Electromagnetic Fields	1259
A Model of Size Effect on Thermal Conductivity for Thin Metallic Films	1264
Dynamic Analysis for Electrified Cantilever Conductive Thin Plates under Transverse Multi-pulse Magnetic Field	1269
Crack Problem in a Thin Superconducting Disk	1274
Magnetoelastic Model of Magnetizable Media	1278
Theoretical Analysis on Quantum Well at Undoped GaN/In _x Ga _{1-x} N/GaN Heterostructure Interface	1283
Optimization for Rotating-scanning Ring Arrays of Synthetic Aperture Radiometer	1287
A Physically Based Parameterized Method to Estimate Cloud Liquid Water over Land Using AMSR-E1	1291
Transient Responses Analysis of Ultra-wideband Filters Illuminated by High-power Electromagnetic Pulses (EMP)	1296
Research on New Technology on Protection of Electronic Systems from High Power Electromagnetic Pulse	1301
A Novel Hybrid Method for Solving the Response of Non-uniform Transmission Line Network	1306
Solving Method for Electromagnetic Pulse Propagation Based on Combination of EMT and TDIE ...	1311
Study of Sapphire Loaded H-Maser in Shanghai Observatory	1316
Improvements on Phase-Shifted Distributed-Coupling-Coefficient Distributed Feedback Laser Structures for Single Longitudinal Mode Operation	1320
On the Performance of DFB Laser Structures Specially Designed for Directly-Modulated Optical Communication Systems	1325
Fabrication of Separately Formed Electro-spun Fibers	1330
Profile Measurement for Micro-optical Component Using Lensless Fourier Digital Holography	1335
A Novel Data Transmission Security via a Noisy Channel Using a Microring Resonator System	1339
An Experimental Design for Reversed Cherenkov Radiation in a Double-negative-metamaterial-loaded Waveguide	1343
A Novel Broadband Metamaterial Resonator with Negative Permittivity	1346
Maxwell Equation in Electromagnetic and Gravitational Fields	1349
Study on Description of Electromagnetic Wave	1354
On 3D Potential Field Solutions for Atmospheric Charge Distributions	1359
Spectral Theory of Beam Scatterings for Object Imaging Using Scanning Millimeter Wave Radar Sensor	1366
FDTD Parallel Computing of Electromagnetic Wave Scattering by Clouds for Microwave Remote Sensing of Weather Satellite	1372
THz Applications for the Engineering Approach to Modelling Frequency Dispersion within Normal Metals at Room Temperature	1378
Sensing of Human Micro-vibration Transmitted Along Solid Using Pico-Tesla Magneto-impedance Sensor (pT-MI Sensor)	1385
Numerical Modelling for Evaluation of Biological Effects Due to High Frequency Radiations in Indoor Environment	1389
Waveguide-based Applicators for Local Microwave Thermotherapy: Feasibility Study of Matrix Array Treatment	1394
The Absorption Capability Measurements of the Free Space Absorbers	1398
The Expanded Uncertainty for Radio Frequency Immunity Testing	1403
Multi-spectral Optoelectronic Sensor Employing Cavity Enhanced Absorption Spectroscopy	1408
Free Space Optics Second Generation versus Shorter Wavelengths	1412

Infrared Detection Module for Free Space Optics	1416
Simulation of Beam Filling Effect on Spaceborne Precipitation Radar Rainfall Retrieval	1421
Comparison of ASAR IM Data and ASAR WS Data in Investigating Co-seismic Deformation of Yutian Earthquake	1425
Design of Electrometric Amplifier for Aspiration Condenser Measurement	1430
Calculation of Angstrom Coefficient of Nano-size Particles in Liquid Environment	1435
Application of Genetic Algorithm for of a Partially Immersed Non-uniform Conductivity Cylinder ...	1440
An Iteration Method for Solving the Asymptotic Equation of Optically Thick Layers	1444
Error Analysis of Using Henyey-Greensterin in Monte Carlo Radiative Transfer Simulations	1449
2-D Image Reconstruction from Microwave Scattering Data	1453
Surface Plasmon Resonance Absorption in a Multilayered Bigrating	1458
A Low-frequency RCS Measurement System in an Anechoic Chamber	1463
Analytical Solutions of TD Scattering Fields from Parabolic Reflector Antenna Illuminated by Plane Waves and Gaussian Beams	1467
THz Bessel Beams Generated by BOEs	1471
Creation of Approximate Bessel Beams by Use of a Fractal Conical Lens	1475
Ku-band Balanced Resistive FET Mixer with Very Low IMD3	1479
Ultra-compact MMIC Chip Set Employing InGaP/GaAs HBT for Ku-band Receiver System	1482
A X-band Duplexer Based on 3-D SICC Using LTCC Technology	1486
The Solution and Simulation for the Stability of Active Receiving Antennas	1491
Improved Design of a Compact Ultra-wideband Microwave Bandpass Filter Using a EBG Structure ..	1496
Tuned Periodical Structures in THz Band Applied in Safety Applications	1500
The Application of a Novel Snake-like Gap Slanted DGS Structure in Microstrip Filter Design	1505
Millimetre Wave Beam Combiner Designed by a GA and the HFSS	1509
Computer Aided Design of Depressed Collector for TWTs Using a New Numerical Methodology	1513
Study on Circularly Polarized Traveling Wave Tube	1518
A Ka-band Power Amplifier Based on Double-probe Microstrip to Waveguide Transition	1521
A 3.5 GHz High-efficiency CMOS RF Power Amplifier with Adaptive Bias	1526
A Novel Four-way Ka-band Power Divider/Combiner Based on Finline	1530
The Design a LNA of 3.1~10.6 GHz UWB Receive System	1534
Design of Fully Integrated RF Power Amplifier for WLAN Applications	1538
The Analysis and Design of High Power Millimeter Wave Pulse Detector for 2 mm Frequency Band ..	1543
Interference Suppression in DC-DC Switch Converter By H_{∞} Controller	1548
Investigation of Detector Responsivity in the “Water Window” Wavelength Range	1553
The Novel Active Mode-locking 402.5 MHz Repetition Rate Pico-second Laser Based on PLL Structure	1557
Accurate Evaluation of RF Coil-tissue Interactions Using a Hybrid FDTD-MoM Method	1560
Choice of Suitable Wavelets for MR Image Processing	1565
Criteria for Wavelet Selection in MR Image Filtering	1569
Diffusion Characteristics of Accumulators Electrode Materials	1573
Measurement of X-ray Radiation in Airplanes and the Related Methods of Protection	1576
Computation of SAR Distribution in a Human Exposed to Mobile Phone Electromagnetic Fields	1580
Effects of Heliogeomagnetic Disturbances on Haemorheological Parameters of Human	1583

Improvement of the Confidence Interval Level of Multi-frequency Microwave Radiometer System for Measuring Deep Brain Temperature in New Born Infants	1587
Validity of Inverse Coupler to Improve Temperature Resolution of One-band Microwave Radiometer for Non-invasive Brain Temperature Monitoring	1591
Influence of Effective Mode Area on Stimulated Brillouin Scattering Slow Light in Optical Fibers	1594
Characterization of InP Based SAGCM Avalanche Photodetector for Single Photon Fiber Optic Communications	1599
Design of a Novel Voltage Sensor Based on Fiber Bragg Grating with Electro-optic Crystal Material Cladding	1604
Modeling and Simulation of Large-scale Rectangular Surface-wave Plasma Source	1608
Property of Subwavelength Resonator with DNG Metamaterials by FDTD Method	1612
Experimental Verification of Anisotropic Three-dimensional Left-handed Metamaterial Composed of Jerusalem Crosses	1616
Application of Optimization Algorithm to Designing Absorber Composed of RHM and LHM	1621
The Transmission Properties of Electromagnetic Wave in Three-dimensional Plasma Photonic Crystals	1626
The Non-constancy of Speed of Light in Vacuum for Different Galilean Reference Systems (Revisited)	1631
Non-constancy of Speed of Light in Vacuum for Different Galilean Reference Systems in Case of an Impulsive Plane Wave	1638
Non-constancy of Speed of Light in Vacuum for Different Galilean Reference Systems and Momentum and Energy of a Particle	1644
Numerical Methods for Three-dimensional Electromagnetic Invisible Cloaks with Irregular Boundary Shapes	1649
Millimeter-wave Signals Generated by Using Up-conversion for Radio-on-fiber System	1653
SVM-based Approach for Buried Object Detection	1657
Electronically Tunable Current Mode Second Order High Pass Filter with Variable Central Frequency f_0	1661
A SAR Superresolution Method Based on 2D Linear Prediction Extrapolation	1665
Construction of a Global Database of Surface Reflectance and Emissivity at a Sub km Resolution	1670
A New Concept of Cold Atom Using Fast Optical Tweezers	1676
Novel Nanoscale Signal Processing and Networking via a Wavelength Router	1679
Novel Molecular Networking via a Simultaneous Optical Wireless Up-down Link Systems	1684
Quantum Parallel Processing Manipulation Using Gaussian Pulses via an Optical Multiplexer	1689
Molecular Transporters Generations Based on Ant Colony Algorithm for Molecular and Storage Applications	1694
Multi-photons Trapping Stability within a Fiber Bragg Grating for Quantum Sensor Use	1698
Novel Multi Channels — Multi Layers Atom Transportation and Quantum Security Using Dynamic Tweezer for Communication Link	1704
Generalized DNA Codes via Nonlinear Micro Ring Resonator for Signal Security Use	1709
Perfume Distribution Using Molecular Networking via an Optical Wireless Link	1714
Multi Transporters Generation for High Density Molecule Transportation via Optical Communication	1720
Multi Quantum-molecular Transportation via Multi Wavelength Layers in a Wavelength Router	1726
Molecule Transportation via Hybrid MUX/DEMUX System	1732
Plasmonic Nanoparticles as Terahertz Oscillators	1738
Microwave Absorption Properties of Cobalt Nanowires Fabricated by Pulse Electrodeposition	1743
Microwave Susceptibility Dispersion Spectra of Nanodot Arrays with Perpendicular Anisotropy	1748
Thickness Effects on Microwave Magnetic Properties of FeCoBSi Films Deposited on Flexible Substrate	1752

Effect of the Very Thin Dielectric Film on the Transmission Properties of the FSS	1756
High Frequency Characteristics and Electrical Properties of Multilayer FeCoHfO/AIO _x Films	1760
A Novel Method to Solve the Complex Transcendental Equation for the Permittivity Determination in Short-circuited Line	1764
Adaptor Calibration Using a Matched Load and an Adjustable Shorter without Specified Phases	1768
A Highly Miniaturized Broadband on-chip Impedance Transformer Employing Periodically Arrayed Ground Structure on Silicon RFIC	1772
Highly Miniaturized On-chip 90° Hybrid Coupler Employing Transmission Line with Periodic Structure	1775
An Artificial-transmission-line-based Miniaturized Doubly Balanced Ring Mixer	1778
Experimental Study of a Longitudinal Magnetic Filter	1782
A Novel Type Phase Shifter Using Rat Race Hybrid	1786
Design of a Class F Power Amplifier	1791
A Study on Equivalent Circuit of Short Wavelength Microstrip Line Employing PPGM on GaAs MMIC	1795
A Design of the LTCC Balanced-to-Unbalanced Bandpass Filters	1798
A Comparative Study of the Field Dependence of the Properties of Colloidal Suspensions of Nanoparticles and of Magnetic Microspheres	1802
PIFA Antenna with Coupling Effect for Bandwidth Enhanced Design and Measurement	1807
Corrugated Tapered Slot Antenna Design and Measurement	1811
Ultra-wideband (UWB) Dipole Antenna Design and Measurement	1814
Wire Inverted-F Antenna Design for WLAN and Bluetooth Operation	1817
Meander Line Antenna for GPS Phone Operation	1820
Antenna Measurement System for CTIA OTA Operation	1823
New Antenna System Measurement Technology for GPS OTA Operation	1826
Double-ridged Horn for 3D Antenna Measurement	1829
Novel Dynamic Optical Tweezers Array Generation Using Dark Soliton Control within an Add/Drop Multiplexer	1832
Author Index	1837
